REPORT OF ANIMALS USED BY OR UNDER CONTROL OF RESEARCH FACILITY (Attach additional sheets if necessary or use APHIS Form 7023A)

A. Animals Covered By The Animal Welfare Regulations	B. Number of animals being bred, conditioned, or held for use in teaching, testing, experiments, research, or surgery but not yet used for such purposes.	C. Number of animals upon which teaching, research, experiments, or tests were conducted involving no pain, distress, or use of pain-relieving drugs.	D. Number of animals upon which experiments, teaching, research, surgery, or tests were conducted involving accompanying pain or distress to the animals and for which appropriate anesthetic, analgesic, or tranquilizing drugs were used.	E. Number of animals upon which teaching, experiments, research, surgery or tests were conducted involving accompanying pain or distress to the animals and for which the use of appropriate anesthetic, analgesic, or tranquilizing drugs would have adversely affected the procedures, results, or interpretation of the teaching, research, experiments, surgery, or tests. (An explanation of the procedures producing pain or distress in these animals and the reasons such drugs were not used must be attached to this report).	F. TOTAL NUMBER OF ANIMALS (COLUMNS C + D + E)
4. Dogs					
5. Cats					
6. Guinea Pigs					
7. Hamsters					
8. Rabbits	0	3	0		3
9. Non-human Primates	2617	1782	294		2076
0. Sheep					
1. Pigs					
2. Other Farm Animals					
3. Other Animals	2413	87	0		87
Short tailed opossum <i>Monodelphis domestica</i>					

ASSURANCE STATEMENTS

- 1) Professionally acceptable standards governing the care, treatment, and use of animals, including appropriate use of anesthetic, analgesic, and tranquilizing drugs, prior to, during, and following actual research, teaching, testing, surgery, or experimentation were followed by this research facility.
- 2) Each principal investigator has considered alternatives to painful procedures.
- 3) This facility is adhering to the standards and regulations under the Act, and it has required that exceptions to the standards and regulations be specified and explained by the principal investigator and approved by the Institutional Animal Care and Use Committee (IACUC). A summary of all such exceptions is attached to this annual report. In addition to identifying the IACUC-approved exceptions, this summary includes a brief explanation of the exceptions, as well as the species and number of animals affected.
- 4) The attending veterinarian for this research facility has appropriate authority to ensure the provision of adequate veterinary care and to oversee the adequacy of other aspects of animal care and use.

Exceptions to the Animal Welfare Act

Approved

By the Institutional Animal Care and Use Committee at the University of Texas Medical Branch,
Galveston, Texas

Four hundred and seventy four (474) sheep were housed in stanchions up to four weeks. They were housed for 48 hours in the stanchions prior to surgery for adaptation purposes in an area adjacent to the animal colony area. The sheep were chronically instrumented with specialized equipment and monitored 24 hours a day except weekends and holidays, when they were visited three times a day. In addition, they were observed daily, seven days a week by Animal Resources Center (ARC) veterinary and/or technical staff.

An estimated twenty-four (24) pigs were placed in customized slings for 24 hours to allow recovery from anesthesia and for restraint to prevent them from damaging their dorsum where the procedures were performed.

Six (6) primates were housed singly in the same room and not allowed physical contact with one another although they were able to see and vocally communicate with each other. These animals had cranial pedestals, which along with the nature of the study and their aggressiveness dictated single housing for their own good. They all had human contact daily by both the animal technician and the veterinarian. Their environment was enriched with the use of kong toys, puzzle feeders, sunflowers seeds, peanuts and a variety of approved items such as PVC piping and toys.

Thirty four (34) dogs were housed in an intensive care unit for 24 hours and then in the ARC colony in pens with less than the required floor space. They were exempted from the exercise program because they were post-operative and required minimal movement. After ten days they were moved to pens that met the minimal floor space requirement.

Attachment for Block E

Hamsters – The procedure involves the inoculation of yellow fever virus. Death as an end point was used to follow the pathogenesis of the virus. A new hemorrhagic fever virus model has been established. Analgesics could affect or alter the pathogenesis of the virus.

October 25, 2000

Attachment 1

List of locations where animals were housed in actual research, testing, teaching or experimentation or held for these purposes.

I. Animals were housed and used in the following buildings:

Optional Column E Explanation Form

This form is intended as an aid to completing the Column E explanation. It is not an official form and its use is voluntary. Names, addresses, protocols, veterinary care programs, and the like, are not required as part of an explanation. A Column E explanation must be written so as to be understood by lay persons as well as scientists.

1. **Registration Number:** 74-R-0008
2. **Number** 16 **of animals used in this study.**
3. **Species (common name)** Rabbit **of animals used in this study.**
4. **Explain the procedure producing pain and/or distress.**

The moderately painful repeated stimulus to be used in this study, a 0.1-2 mamp hindlimb shock given for 2 seconds is standard in studies of Pavlovian conditioning (Welsh and Harvey, 1991; Kelly et al., 1990). The only behavioral response induced in rabbits by a 2-3 mamp stimulus is a blink. This level of pain is minimized to limit the distress to the rabbit as indicated by the only response being an eyeblink (Welsh and Harvey, 1991; Kelly et al., 1990).

5. **Provide scientific justification why pain and/or distress could not be relieved. State methods or means used to determine that pain and/or distress relief would interfere with test results.** (For Federally mandated testing, see question 6 below)

This study was designed as part of a line of investigation of hypnosis for pain management. The overall approach of this line of investigation is to study the neural basis of cognitive effects on pain in an established rabbit model. This knowledge will be applied to produce more effective and safer pain medications and treatments in human patients. The animal model uses a short 2 second hindlimb shock to induce a mild pain in the rabbit, like a pin-prick, so that the effect of hypnosis on the perception of pain can be tested. Only by inducing pain in the animal can the subsequent trial with hypnosis be performed. Use of pain medications would interfere with the brain responses (i.e., metabolic activity) to pain. Because the brain mechanisms which control cognitive effects on pain are not understood, computer models have not been developed that could be used to study cognitive effects on pain.

6. **What, if any, federal regulations require this procedure? Cite the agency, the Code of Federal Regulations (CFR) title number and the specific section number (e.g., APHIS, 9 CFR 113.102):** None

Optional Column E Explanation Form

This form is intended as an aid to completing the Column E explanation. It is not an official form and its use is voluntary. Names, addresses, protocols, veterinary care programs, and the like, are not required as part of an explanation. A Column E explanation must be written so as to be understood by lay persons as well as scientists.

1. Registration Number: 74-R-0011
2. Number 21 total/8 in Column E of animals used in this study.
3. Species (common name) guinea pig of animals used in this study.
4. Explain the procedure producing pain and/or distress.

Guinea pigs are injected with approximately 0.06% sodium hyaluronate, horse serum (positive control), or 0.9% saline (negative control), on three occasions into the peritoneal cavity. Subsequently, each test subject is injected intravenously and examined for anaphylactic response for a period up to 23 days. Guinea pigs are humanely euthanized after the last regimen is completed. The eight animals in Column E are positive controls and are expected to exhibit symptoms of respiratory distress, collapse and death.

5. Provide scientific justification why pain and/or distress could not be relieved. State methods or means used to determine that pain and/or distress relief would interfere with test results. (For Federally mandated testing, see question 6 below)

The guinea pig is an established model for antigen-induced respiratory anaphylaxis. Anaphylaxis is the required outcome of the positive control for this study. No analgesic compounds were administered since they would potentially confound interpretation and conclusions from this study. This test was developed in response to required safety testing by the Japanese Ministry of Health and Welfare for marketing viscoelastic products in Japan.

6. What, if any, federal regulations require this procedure? Cite the agency, the Code of Federal Regulations (CFR) title number and the specific section number (e.g., APHIS, 9 CFR 113.102):

Agency Japanese Ministry of Health and Welfare CFR The Pharmacopoeia of Japan, 12th edition, 1992, page 255

Optional Column E Explanation Form

This form is intended as an aid to completing the Column E explanation. It is not an official form and its use is voluntary. Names, addresses, protocols, veterinary care programs, and the like, are not required as part of an explanation. A Column E explanation must be written so as to be understood by lay persons as well as scientists.

1. Registration Number: 74-R-0012
2. Number 4 of animals used in this study.
3. Species (common name) Guinea Pig of animals used in this study.
4. Explain the procedure producing pain and/or distress.

Guinea pigs are injected with small volumes (0.1-0.2 ml) of either sterile saline or purified E. coli endotoxin (4 mg/kg) diluted in sterile saline as a rapid IP injection. This procedure has been shown to produce no apparent initial discomfort or stress to the animal for several hours; animals move about, eat, and drink freely. Within 5-6 hours, the signs and symptoms of circulatory depression begin to appear: low blood pressure, central nervous system depression, lethargy, and non-responsiveness to the environment. The study involves evaluation of smooth muscle and cardiac contractile function and appropriate therapy throughout the various stages of endotoxemia. Thus, at various time periods following injection, guinea pigs are euthanized and tissues (heart, aorta, and other vascular tissues) excised for study.

5. Provide scientific justification why pain and/or distress could not be relieved. State methods or means used to determine that pain and/or distress relief would interfere with test results. (For Federally mandated testing, see question 6 below)

All analgesics, anesthetics, and CNS depressants markedly alter and further depress this model, as well as affect the basic mechanisms of cardiac contractile function to be evaluated. This model is similar to the human septic shock state following bacteremic infection.

Databases searched: Medline

Dates searched (inclusive): 1966-present

Keywords: septic shock, endotoxemia, guinea pigs, analgesia, anesthesia.

6. What, if any, federal regulations require this procedure? Cite the agency, the Code of Federal Regulations (CFR) title number and the specific section number (e.g., APHIS, 9 CFR 113.102):

Goats			2		2
Frogs		176	62		238

ASSURANCE STATEMENTS

- 1) Professionally acceptable standards governing the care, treatment, and use of animals, including appropriate use of anesthetic, analgesic, and tranquilizing drugs, prior to, during, and following actual research, teaching, testing, surgery, or experimentation were followed by this research facility.
- 2) Each principal investigator has considered alternatives to painful procedures.
- 3) This facility is adhering to the standards and regulations under the Act, and it has required that exceptions to the standards and regulations be specified and explained by the principal investigator and approved by the Institutional Animal Care and Use Committee (IACUC). A summary of all such exceptions is attached to this annual report. In addition to identifying the IACUC-approved exceptions, this summary includes a brief explanation of the exceptions, as well as the species and number of animals affected.
- 4) The attending veterinarian for this research facility has appropriate authority to ensure the provision of adequate veterinary care and to oversee the adequacy of other aspects of animal care and use.

26 October 2000

USDA Registration No. 74-R-071

The University of Texas Health Science Center at San Antonio
USDA Report 1999-00
Category "E"

Twenty-Six (26) Dogs

Anti-cancer candidate drugs were administered to 26 dogs for regulatory (NDA or IND) toxicology studies. These dogs were included in category "E" due to the potential for adverse effects from the drugs. Anesthetics, analgesics or other treatment modalities were precluded since they would confound data on this strict GLP regulatory protocol.

Seventy-Two (72) Guinea Pigs

Protocols to study the efficacy of new anti-fungal agents against systemic aspergillosis were approved to use 120 guinea pigs. Seventy-two of these animals were used in 1999-2000. All animals were challenged with the agent and then provided different treatment regimens. They were included in Category "E" due to the potential of developing clinical signs of disease. Analgesics were not administered due to their ability to interfere with clinical observations and alter survival rates. All animals were monitored daily and animals appearing moribund, or exhibiting severe clinical signs were euthanatized.

Optional Column E Explanation Form

This form is intended as an aid to completing the Column E explanation. It is not an official form and its use is voluntary. Names, addresses, protocols, veterinary care programs, and the like, are not required as part of an explanation. A Column E explanation must be written so as to be understood by lay persons as well as scientists.

1. Registration Number: _____
2. Animals used in this study: 6
3. Species (common name) used in this study: **Rabbit**
4. Explain the procedure producing pain and/or distress.

Rabbits were given endotoxin lipopolysaccharides (LPS), to induce disseminated intravascular coagulation (DIC). Although we did not observe any apparent pain and/or distress in these animals, it was possible that rabbits could have experienced some pain/distress that normally is associated with inflammation induced by LPS.

5. Provide scientific justification why pain and/or distress could not relieved. State methods or means used to determine that pain and/or distress relief would interfere with test results. (For Federally mandated testing, see question 6 below)

The primary objective of the study is to evaluate effect of plant compounds for their antithrombotic effects. Therefore it was necessary to induce clotting by administering LPS. Lowering LPS dose would have minimized the inflammation, which would reduce pain/distress but lower doses may not induce DIC.

6. What, if any, federal regulations require this procedure? Cite the agency, the Code of Federal Regulations (CFR) title number and the specific section number (e.g, APHIS, 9 CFR 113.102):

N/A

Agency _____ CFR _____

Optional Column E Explanation Form

This form is intended as an aid to completing the Column E explanation. It is not an official form and its use is voluntary. Names, addresses, protocols, veterinary care programs, and the like, are not required as part of an explanation. A Column E explanation must be written so as to be understood by lay persons as well as scientists.

1. Registration Number: Protocol # 245
2. Number 6 of animals used in this study.
3. Species (common name) Rabbit of animals used in this study.

4. Explain the procedure producing pain and/or distress.

The collapsing of a lung and accumulation of air or gas in the pleural space (pneumothorax) can occur spontaneously, as the result of trauma or disease or can be induced deliberately. When the lung is reinflated some patients experience lung injury with the lungs filling with fluid (edema) and inflammatory cells. We wish to determine if this injury is caused by the inflammatory response, and if it can be reduced by inhibitors of chemokine molecules such as interleukin-8 (IL-8).

The rabbits are sedated Acepromazine and a pre-procedure arterial blood sample (3ml) withdrawn from the ear. The rabbits are then anesthetized with Dormitor and Ketaset. A small incision will be made over the lateral aspect of the 3rd or 4th rib. A bag containing sterile, saline solution is then introduced into the left thoracic space to collapse the lung fully. The incision is closed, and the rabbit is administered Butorphanol to minimize post surgical pain, and allowed to wake. During the following seven days the animals are monitored for distress (respiration rate, posture, capillary refill time). However, no further analgesic was required. After seven days the rabbits were sedated with Acepromazine, and a blood sample taken. The rabbits were then anesthetized, the saline bag removed, and the lung reinflated. The animals were maintained under full anesthesia until they were euthanized 3 hours later.

5. Provide scientific justification why pain and/or distress could not be relieved. State methods or means used to determine that pain and/or distress relief would interfere with test results. (For Federally mandated testing, see question 6 below)

While the animals are usually group-housed as part of the environmental program and to reduce stress, after the lung was deflated, they were housed individually, in cages to reduce the possibility of post surgical trauma and infection. Methods used to reduce pain and distress of the experimental procedures are described above.

6. What, if any, federal regulations require this procedure? Cite the agency, the Code of Federal Regulations (CFR) title number and the specific section number (e.g., APHIS, 9 CFR 113.102):

Protocol ~~000143X~~

4. Deer mice and voles were toe-clipped at the first joint of one or more feet and released at the point of capture. Only one toe maximum was clipped on a single foot. Sharp toenail clippers were used to clip toes.

5. Toe clipping as a method of identifying small mammals has been routinely used in many mark-recapture studies and is the only method of permanent identification. Permanent identification is critical to conducting mark-recapture studies for the purpose of estimating population size and survival (White et al., 1982). This technique has been used extensively for studies involving cotton rats, deer mice, harvest mice, and others. Data from these studies show excellent recaptures of animals and do not indicate any avoidance of traps as a result of being toe clipped (McMurry, 1993). In addition, this technique has not been shown to result in decreased survival of rodents (Pavone and Boonstra, 1985). Toe clipping was performed by [redacted] in South Carolina on animals under anesthesia using an inhalant. In this case, the ability of the researchers to effectively toe clip the animal was essentially voided by the fact that while the animals were anesthetized, their feet and toes were so relaxed that it was impossible to clip the toes without using both hands. When both hands are used, the animal starts moving around as they are not in a deep sleep, and they are hard to control and usually start biting and trying to escape. A deeper anesthesia is not desirable as the animal would need to be cared for until it recovered or risk exposure to adverse climate or predation before recovery (Seal and Kreeger, 1987). Small animals, such as rodents, are vulnerable to dehydration and depletion of short-term energy reserves after spending time in a trap, so removing animals from traps in a timely manner is important. Also, after being in traps for several hours (over-night), rodents are potentially more sensitive to drugs and fluid treatment may be necessary (Seal and Kreeger, 1987). Intensive care for animals immobilized with drugs is not feasible when checking hundreds of traps in mark-recapture studies. Spending lots of time with drugged individuals would require either letting other animals spend more time in traps or running fewer traps. It is desirable to remove animals from traps as soon as possible to avoid problems with exposure (even when traps are equipped with cotton or shade) or dehydration or nutrient stress (even though traps are baited). Running fewer traps interferes with the study design, as demographic data is sensitive to temporal variation. Thus, the integrity of the study can be compromised when traps on different grids are not checked at the same time.

ASSURANCE STATEMENTS

- 1) Professionally acceptable standards governing the care, treatment, and use of animals, including appropriate use of anesthetic, analgesic, and tranquilizing drugs, prior to, during, and following actual research, teaching, testing, surgery, or experimentation were followed by this research facility.
- 2) Each principal investigator has considered alternatives to painful procedures.
- 3) This facility is adhering to the standards and regulations under the Act, and it has required that exceptions to the standards and regulations be specified and explained by the principal investigator and approved by the Institutional Animal Care and Use Committee (IACUC). A summary of all such exceptions is attached to this annual report. In addition to identifying the IACUC-approved exceptions, this summary includes a brief explanation of the exceptions, as well as the species and number of animals affected.
- 4) The attending veterinarian for this research facility has appropriate authority to ensure the provision of adequate veterinary care and to oversee the adequacy of other aspects of animal care and use.

COLUMN E EXPLANATION

Nov. 13, 2000

Procedure causing pain or distress:

Hyper immune serum production is accomplished by injection of the antigen(s) in oil/aqueous emulsion. This emulsion forms a subcutaneous "depot" which is absorbed over a period of 2-7 days. Oil phase consists of Freund's Complete (contains bacterial cell wall component) or Freund's Incomplete (does not contain bacterial cell wall component) Adjuvant. Oil/aqueous injections are administered sub-Q in a maximum volume of 2 ml, consisting of 50% oil phase and 50% aqueous phase. Injection site is at the neck, above the shoulders. Footpad injections are not utilized at this facility.

Reactions to these injections occur approximately as follows:

60% of animals have no visible response to the injections

30% of animals develop sub-q endurations of 3 mm or less, which dissipate in 5-10 days

9% of animals develop sub-q endurations of 3 mm or less, which dissipate in 10-30 days

1% of animals develop lesions with drainage. These lesions are treated topically with antibiotics and no further Freund's Complete Adjuvant is administered. (In most cases draining lesions are associated with Freund's Complete Adjuvant)

001 30

Optional Column E Explanation Form

This form is intended as an aid to completing the Column E explanation. It is not an official form and its use is voluntary. Names, addresses, protocols, veterinary care programs, and the like, are not required as part of an explanation. A Column E explanation must be written so as to be understood by lay persons as well as scientists.

1. Registration Number: 74-R-0156
2. Number 99 (98 Rabbit + 1 Goat) of animals used in this study.
98 Rabbit
3. Species (common name) 1 Goat of animals used in this study.

4. Explain the procedure producing pain and/or distress.

Hyperimmune serum production involving multiple antigen-Adjuvant injections. Adjuvant used = Freund's Complete and Freund's Incomplete.

See addendum Attached -

5. Provide scientific justification why pain and/or distress could not be relieved. State methods or means used to determine that pain and/or distress relief would interfere with test results. (For Federally mandated testing, see question 6 below)

Antigen-Adjuvant injections cause mild to moderate inflammatory response ranging from a few hours to several days. Use of ~~anesthetic~~ anti-inflammatory agents ~~diminish~~ diminish immune response and therefore interfere with a hyperimmune serum production.

6. What, if any, federal regulations require this procedure? Cite the agency, the Code of Federal Regulations (CFR) title number and the specific section number (e.g., APHIS, 9 CFR 113.102):

Agency _____ CFR _____

ASSURANCE STATEMENTS

- 1) Professionally acceptable standards governing the care, treatment, and use of animals, including appropriate use of anesthetic, analgesic, and tranquilizing drugs, prior to, during, and following actual research, teaching, testing, surgery, or experimentation were followed by this research facility.
- 2) Each principal investigator has considered alternatives to painful procedures.
- 3) This facility is adhering to the standards and regulations under the Act, and it has required that exceptions to the standards and regulations be specified and explained by the principal investigator and approved by the Institutional Animal Care and Use Committee (IACUC). A summary of all such exceptions is attached to this annual report. In addition to identifying the IACUC-approved exceptions, this summary includes a brief explanation of the exceptions, as well as the species and number of animals affected.
- 4) The attending veterinarian for this research facility has appropriate authority to ensure the provision of adequate veterinary care and to oversee the adequacy of other aspects of animal care and use.

REPORTING FACILITY (List all locations where animals were housed or used in actual research, testing, or experimentation, or held for these purposes. Attach additional sheets if necessary)

FACILITY LOCATIONS (Sites) - See Attached Listing

Research is done in the field and the animals are not housed at any indiv. sit

REPORT OF ANIMALS USED BY OR UNDER CONTROL OF RESEARCH FACILITY (Attach additional sheets if necessary or use APHIS Form 7023A)

A. Animals Covered By The Animal Welfare Regulations	B. Number of animals being bred, conditioned, or held for use in teaching, testing, experiments, research, or surgery but not yet used for such purposes.	C. Number of animals upon which teaching, research, experiments, or tests were conducted involving no pain, distress, or use of pain-relieving drugs.	D. Number of animals upon which experiments, teaching, research, surgery, or tests were conducted involving accompanying pain or distress to the animals and for which appropriate anesthetic, analgesic, or tranquilizing drugs were used.	E. Number of animals upon which teaching, experiments, research, surgery or tests were conducted involving accompanying pain or distress to the animals and for which the use of appropriate anesthetic, analgesic, or tranquilizing drugs would have adversely affected the procedures, results, or interpretation of the teaching, research, experiments, surgery, or tests. (An explanation of the procedures producing pain or distress in these animals and the reasons such drugs were not used must be attached to this report.)	F. TOTAL NUMBER OF ANIMALS (COLUMNS C + D + E)
4. Dogs					
5. Cats					
6. Guinea Pigs					
7. Hamsters					
8. Rabbits					
9. Non-human Primates					
0. Sheep					
1. Pigs					
2. Other Farm Animals					
3. Other Animals					
bats		5000			5000
rabbits (wild)		3			3

ASSURANCE STATEMENTS

- 1) Professionally acceptable standards governing the care, treatment, and use of animals, including appropriate use of anesthetic, analgesic, and tranquilizing drugs, prior to, during, and following actual research, teaching, testing, surgery, or experimentation were followed by this research facility.
- 2) Each principal investigator has considered alternatives to painful procedures.
- 3) This facility is adhering to the standards and regulations under the Act, and it has required that exceptions to the standards and regulations be specified and explained by the principal investigator and approved by the Institutional Animal Care and Use Committee (IACUC). A summary of all such exceptions is attached to this annual report. In addition to identifying the IACUC-approved exceptions, this summary includes a brief explanation of the exceptions, as well as the species and number of animals affected.
- 4) The attending veterinarian for this research facility has appropriate authority to ensure the provision of adequate veterinary care and to oversee the adequacy of other aspects of animal care and use.

FACILITY LOCATIONS (Sites) - See Attached Listing

REPORT OF ANIMALS USED BY OR UNDER CONTROL OF RESEARCH FACILITY (Attach additional sheets if necessary or use APHIS Form 7023A)

A. Animals Covered By The Animal Welfare Regulations	B. Number of animals being bred, conditioned, or held for use in teaching, testing, experiments, research, or surgery but not yet used for such purposes.	C. Number of animals upon which teaching, research, experiments, or tests were conducted involving no pain, distress, or use of pain-relieving drugs.	D. Number of animals upon which experiments, teaching, research, surgery, or tests were conducted involving accompanying pain or distress to the animals and for which appropriate anesthetic, analgesic, or tranquilizing drugs were used.	E. Number of animals upon which teaching, experiments, research, surgery or tests were conducted involving accompanying pain or distress to the animals and for which the use of appropriate anesthetic, analgesic, or tranquilizing drugs would have adversely affected the procedures, results, or interpretation of the teaching, research, experiments, surgery, or tests. (An explanation of the procedures producing pain or distress in these animals and the reasons such drugs were not used must be attached to this report).	F. TOTAL NUMBER OF ANIMALS (COLUMNS C + D + E)
4. Dogs	412	12	178		190
5. Cats	1		21		21
6. Guinea Pigs	5	5			5
7. Hamsters					0
8. Rabbits	134	26	914		940
9. Non-human Primates	5	37	54		91
0. Sheep			3		3
1. Pigs	2		43		43
2. Other Farm Animals					
3. Other Animals					
Ground Squirrels			35		35
Ferrets	4	12			12
Gerbils		40			40

ASSURANCE STATEMENTS

- 1) Professionally acceptable standards governing the care, treatment, and use of animals, including appropriate use of anesthetic, analgesic, and tranquilizing drugs, prior to, during, and following actual research, teaching, testing, surgery, or experimentation were followed by this research facility.
- 2) Each principal investigator has considered alternatives to painful procedures.
- 3) This facility is adhering to the standards and regulations under the Act, and it has required that exceptions to the standards and regulations be specified and explained by the principal investigator and approved by the Institutional Animal Care and Use Committee (IACUC). A summary of all such exceptions is attached to this annual report. In addition to identifying the IACUC-approved exceptions, this summary includes a brief explanation of the exceptions, as well as the species and number of animals affected.
- 4) The attending veterinarian for this research facility has appropriate authority to ensure the provision of adequate veterinary care and to oversee the adequacy of other aspects of animal care and use.

Report

TEGORY E"

e to be reported

XCEPTIONS"

eeep

Atten individually instrumented sheep were housed in small, elevated pens. This procedure is done to minimize the environmental stresses to the animal, and to provide reproducible results. The size of the pen permits the sheep to standup, laydown, or turn body positions.

Pigs

Six pregnant sows were housed in farrowing pens beginning one week prior to parturition. The sow is returned to routine housing after weaning of the piglets.

This procedure is done to prevent accidental injury to the piglets by the sow.

REPORT OF ANIMALS USED BY OR UNDER CONTROL OF RESEARCH FACILITY (Attach additional sheets if necessary or use this form.)

[illegible]

ASSURANCE STATEMENTS

- 1). Professionally acceptable standards governing the care, treatment, and use of animals, including appropriate use of anesthetic, analgesic, and tranquilizing drugs, prior to, during, and following actual research, teaching, testing, surgery, or experimentation were followed by this research facility.
- 2). Each principal investigator has considered alternatives to painful procedures.
- 3). This facility is adhering to the standards and regulations under the Act, and it has required that exceptions to the standards and regulations be specified and explained by the principal investigator and approved by the Institutional Animal Care and Use Committee (IACUC). A summary of all such exceptions is attached to this annual report. In addition to identifying the IACUC-approved exceptions, this summary includes a brief explanation of the exceptions, as well as the species and number of animals affected.
- 4). The attending veterinarian for this research facility has appropriate authority to ensure the provision of adequate veterinary care and to oversee the adequacy of other aspects of animal care and use.

I certify that the above is true, correct, and complete (7 U.S.C. Section 2143).

ASSURANCE STATEMENTS

- 1) Professionally acceptable standards governing the care, treatment, and use of animals, including appropriate use of anesthetic, analgesic, and tranquilizing drugs, prior to, during, and following actual research, teaching, testing, surgery, or experimentation were followed by this research facility.
- 2) Each principal investigator has considered alternatives to painful procedures.
- 3) This facility is adhering to the standards and regulations under the Act, and it has required that exceptions to the standards and regulations be specified and explained by the principal investigator and approved by the Institutional Animal Care and Use Committee (IACUC). A summary of all such exceptions is attached to this annual report. In addition to identifying the IACUC-approved exceptions, this summary includes a brief explanation of the exceptions, as well as the species and number of animals affected.
- 4) The attending veterinarian for this research facility has appropriate authority to ensure the provision of adequate veterinary care and to oversee the adequacy of other aspects of animal care and use.

REPORT OF ANIMALS USED BY OR UNDER CONTROL OF RESEARCH FACILITY (Attach additional sheets if necessary or use APHIS Form 7023A)

A. Animals Covered By The Animal Welfare Regulations	B. Number of animals being bred, conditioned, or held for use in teaching, testing, experiments, research, or surgery but not yet used for such purposes.	C. Number of animals upon which teaching, research, experiments, or tests were conducted involving no pain, distress, or use of pain-relieving drugs.	D. Number of animals upon which experiments, teaching, research, surgery, or tests were conducted involving accompanying pain or distress to the animals and for which appropriate anesthetic, analgesic, or tranquilizing drugs were used.	E. Number of animals upon which teaching, experiments, research, surgery or tests were conducted involving accompanying pain or distress to the animals and for which the use of appropriate anesthetic, analgesic, or tranquilizing drugs would have adversely affected the procedures, results, or interpretation of the teaching, research, experiments, surgery, or tests. (An explanation of the procedures producing pain or distress in these animals and the reasons such drugs were not used must be attached to this report).	F. TOTAL NUMBER OF ANIMALS (COLUMNS C + D + E)
4. Dogs					
5. Cats					
6. Guinea Pigs					
7. Hamsters					
8. Rabbits					
9. Non-human Primates					
0. Sheep		27			27
1. Pigs					
2. Other Farm Animals					
3. Other Animals					
Elk		1			1
Fallow Deer		143			143
Red Deer		108			108

ASSURANCE STATEMENTS

- 1) Professionally acceptable standards governing the care, treatment, and use of animals, including appropriate use of anesthetic, analgesic, and tranquilizing drugs, prior to, during, and following actual research, teaching, testing, surgery, or experimentation were followed by this research facility.
- 2) Each principal investigator has considered alternatives to painful procedures.
- 3) This facility is adhering to the standards and regulations under the Act, and it has required that exceptions to the standards and regulations be specified and explained by the principal investigator and approved by the Institutional Animal Care and Use Committee (IACUC). A summary of all such exceptions is attached to this annual report. In addition to identifying the IACUC-approved exceptions, this summary includes a brief explanation of the exceptions, as well as the species and number of animals affected.
- 4) The attending veterinarian for this research facility has appropriate authority to ensure the provision of adequate veterinary care and to oversee the adequacy of other aspects of animal care and use.

ASSURANCE STATEMENTS

- 1) Professionally acceptable standards governing the care, treatment, and use of animals, including appropriate use of anesthetic, analgesic, and tranquilizing drugs, prior to, during, and following actual research, teaching, testing, surgery, or experimentation were followed by this research facility.
- 2) Each principal investigator has considered alternatives to painful procedures.
- 3) This facility is adhering to the standards and regulations under the Act, and it has required that exceptions to the standards and regulations be specified and explained by the principal investigator and approved by the Institutional Animal Care and Use Committee (IACUC). A summary of all such exceptions is attached to this annual report. In addition to identifying the IACUC-approved exceptions, this summary includes a brief explanation of the exceptions, as well as the species and number of animals affected.
- 4) The attending veterinarian for this research facility has appropriate authority to ensure the provision of adequate veterinary care and to oversee the adequacy of other aspects of animal care and use.
